Consulting Proposal

# Cover Letter

Dear Woolworths Group Leadership Team,

Thanks to your invitation to put forward this consulting statement on the increasing issue of promotional pricing at Woolworths and consumer confidence.

The current issue must not be limited to a pricing debate, this is the proposal. It is not a consumer mistrust problem, though, but a more general consumer mistrust problem with pricing transparency, promotional legitimacy and organisational governance. With the pressure of public opinion, ACCC investigations and the media continuing to increase, it's time Woolworths takes note of the root causes of the loss of trust.

The methodology of our proposal is integrated to consult, which is used to diagnose the problem from many angles and not only pricing mechanics. The methodology suggested is a consolidated approach of the Consumer Journey Map, Trust Equation, Five Why Analysis, Stakeholder Mapping Matrix and Risk Map, and will be used to evaluate the trust breach, its root cause and what further risks are there among the stakeholders in the organisation.

An overview of the relationship between promotional communication, consumer perception, governance processes and reputational risk, which is more detailed than a typical price analysis. The methodology is designed to help Woolworths narrow down large or unrealistic areas of consultation to the strategic areas they need to focus on.

We appreciate your consideration and look forward to the opportunity to further discuss this proposal.

Sincerely,

*Kangaroo Group*

# 1. Executive Summary

In recent times, Woolworths has been the subject of heightened attention from both the regulator and the public for alleged misleading promotional pricing practices which have been associated with “Prices Dropped” campaigns. Rumors of this controversy seemed to have been sparked by operational pricing problems, but this idea suggests that a greater problem is the loss of consumer trust. Consumer trust in the pricing communication and overall credibility of the organisation at Woolworths has undermined its reputation as a result of allegations of temporary price increases, unfair promotions, and the authenticity of the discounts. However, in a country where the cost of living continues to be a concern, these concerns are particularly relevant as consumers are very sensitive to promotional pricing when determining what to buy. The focus of the debate is shifting from pricing mechanisms to the growing public, media and ACCC doubts on transparency, governance and long-term brand legitimacy.

The proposed approach is to use an integrated consulting methodology based on the Consumer Journey Map, Trust Equation, Five Why Analysis, Stakeholder Mapping Matrix and Risk Map to investigate this issue. The proposal does not attempt to present any single framework, but rather it offers several interrelated tools to look at the issue from both consumer and organisational perspectives. The Consumer Journey Map shows how trust slowly turned from confidence to scepticism on various Consumer touchpoints, and the Trust Equation illustrates the reasons behind the loss of credibility and reliability over time. The Five Why Analysis then explores the deeper organisational and governance issues that could have played a role in the emergence of the promotional pricing system. Moreover, the Stakeholder Mapping Matrix provides an analysis of the fragmented pressures from stakeholders that enabled the issue to remain on the agenda and the Risk Map analyses potential risks and organisational reactions in relation to the future of trust recovery. If combined, these tools offer a more holistic diagnosis than a standard pricing analysis and create a single consulting framework that connects the consumer perception, organisational behaviour, stakeholder pressure and reputational risk within a single framework.

## 2. Context and Problem Definition

### 2.1 Background of the Woolworths Pricing Controversy

---

The Woolworths Group have been under a great deal of regulatory pressure and public backlash for their practices of misleading promotional pricing in Australia. The Australian Competition and Consumer Commission (ACCC) filed a legal action in September 2024 against both supermarket chains for misleading “Prices Dropped” and “Down Down” discount campaigns (ACCC, 2024).

The ACCC found that there was evidence of Woolworths raising the price of at least 266 products for short periods before reintroducing them as part of “Prices Dropped” promotions (ACCC, 2024). Some advertised discounts were potentially “illusory” because the advertised price was not a true long term discount, the regulator argued. The ACCC also said that these practices could have affected consumers' ability to make informed decisions about the essential grocery products they purchase.

The issue made much news in Australia. The legal move drew attention to the affordability of groceries, promotions and pricing transparency in supermarkets, and raised public concerns that continue in the grocery sector (Atkin & Davoren, 2024). It came out amidst an ongoing cost of living crisis in Australia, as consumers are more mindful about supermarket prices and household costs.

**Figure 1**

**Figure 2**

Example of a Woolworths electronic “Prices Dropped” shelf label.

Note. Adapted from ACCC v Woolworths Group Limited (2024).

**Figure 3**

Example of a Woolworths online “Prices Dropped” promotion.

Note. Adapted from ACCC v Woolworths Group Limited (2024).

The public also had questions about Woolworths' “Prices Dropped” promotions. As illustrated in Figures 1–4, certain advertised discounts seemed to offer minimal, if any, savings for consumers, thereby leaving the impression that there may not be a true value in the discount and/or that pricing might not be transparent. Furthermore, consumers may have been unable to make a clear comparison of the value of products due to lack of clear information about the unit price.

**Figure 4**

Oreo Family Pack Original 370g pricing changes during the “Prices Dropped” promotion period.

Note. Adapted from ACCC v Woolworths Group Limited (2024).

The conversation about pricing at Woolworths began to move beyond single instances of pricing to the question of how the pricing and promotional processes are managed at the store. Reporting by The Guardian stated that Woolworths executives told the court that “Prices Dropped” rules were originally intended to prevent “gaming” the promotional system (McLeod, 2026). Media coverage and regulatory investigation continued and there spread a wider debate about transparency and accountability within organizations and trust in the supermarket promotional process.

## 2.2 Identify the Consulting Problem

The debate is largely about price, but the bigger consulting challenge is one of consumer trust – in what is a typical promotional transparency and pricing credibility at a Woolworths.

The claims made by the ACCC, and the publicity it has received, have brought public debate away from the individual discounts and into the question of whether the communication that Woolworths uses in its promotion of these discounts is reliable, transparent and accurate. Not only are consumers wondering about the worth of specific incentives, they're also wondering whether the company's pricing policies are overall fairly and honestly.

This is a key topic since the trust of consumers plays a crucial role in the supermarket retailing promotional pricing. Consumers don't usually have the means to check the history of prices and instead, depend on retailers to accurately convey discounts. If promotional claims are seen as being misleading or conflicting, discontent can spread from product to product and to general mistrust of the retailer's credibility.

The debate also highlights the general challenges that are impacting the supermarket sector. With the current cost of living, consumers are paying far more attention to the price of food, and are far more critical of big retail outlets that appear to be taking advantage of economic distress. Consequently, problems with pricing transparency are now considered more as concerns about fairness, accountability and organizational integrity than about operational pricing decisions.

From a consulting viewpoint, the problem can also signal potential shortcomings in pricing governance, promotional control, and organizational accountability processes. The controversy could just be a series of bad promotional choices, but it could also be indicative of a lack of internal controls which have enabled a public backlash and reputational damage to build up as a result of corporate actions.

So the main issue of the consulting problem is not the question of whether certain discounts were deceptive. Instead, it's about the impact of perceived inconsistencies between the message and the price on consumer trust, brand reputation and the reputational risk for Woolworths in an increasingly sensitive retail customer landscape.

## 2.3 Scope of the Consulting Engagement

This proposal sets a clear project scope to ensure focus in the analysis and to get a realistic engagement.

### In Scope

- Promotional pricing communication;
- Consumer attitudes about pricing transparency and promotion fairness;
- The connection between discount credibility and consumer trust; and
- Pricing governance processes and drivers;
- Stakeholder pressure, reputational exposure;
- Assessment of risk of loss of consumer confidence.

The proposed engagement will specifically explore the impact of the promotional communication of Woolworths on perceptions of customers and examine if there is evidence that the governance of Woolworths may have contributed to the rising concerns by the public regarding pricing transparency. The proposal will also test the impact of greater regulatory, media and consumer focus could drive up reputational risk (McLeod, 2026).

### Out of Scope

- Final court decision on ACCC claims;
- Complete revamp of the pricing policy at Woolworths;
- More comprehensive corporate strategy change;
- Specific financial forecast or projections;
- Implementation of pricing changes in the company.

The scope boundaries are designed to keep the engagement on the topic of consumer trust, pricing transparency and organizational governance and do not attempt to extend into legal determination or into general operational redesign.

# 3. Methodology

## 3.1 Consumer Journey Map: From Price Signal to Defensive Shopping

The Consumer Journey Map (Lemon & Verhoef, 2016) identifies the points at which consumer trust in Woolworths' pricing was built, damaged, and finally lost. Instead of trusting Woolworths' own labels, consumers began turning to external sources, the ACCC, CHOICE, and media, to check whether a discount was real ( see Figure5 ).

**Figure 5**  
Consumer Journey Map: Woolworths "Prices Dropped" Controversy

**Note:** Adapted from Lemon and Verhoef (2016). The Oreo Family Pack Original 370g pricing sequence is presented as alleged by the ACCC. Evidence sources include ACCC (2024), CHOICE (2024), Inside FMCG (2026), and ACCC v Coles Supermarkets Australia Pty Ltd [2026] FCA 598. Woolworths' Federal Court judgment was reserved at the time of writing (May 2026).

## The trust problem started before the ACCC did.

The turning point is stage 3. The ACCC claims the Oreo Family Pack Original 370g was sold at \$3.50 for more than 180 days, followed by a change to \$5.00 for 22 days, before being sold on "Prices Dropped" at \$4.50, which is still 29% higher than the original long-term price (ACCC, 2024; Paterson, 2026).

**Figure 6**

Consumer consideration shift: Woolworths vs Aldi (Jan 2023 – Jan 2025)

Once the reference price loses credibility, every promotional label built on it does too. This is framing at work (Brooke, Lecture 4, 31 March 2025): the 'was/now' format anchors consumer judgment to an artificially high price, making \$4.50 look like a saving when it is not, because consumers did not see \$3.50.

## The ACCC did not create the trust problem. It made it visible.

CHOICE research found that by April 2024, one in four consumers did not know if supermarket price labels were displaying a true discount (CHOICE, 2024). This was five months before the ACCC began legal action. When the ACCC started separate Federal Court proceedings on 23 September 2024 (ACCC, 2024), it gave legal weight to doubts that already existed.

## The damage is now measurable and behavioural.

Consideration for Woolworths dropped from 66% to 56% between January 2023 and 2025, while Aldi jumped from 48% to 50% (YouGov, 2025). Woolworths shoppers have not abandoned shopping at Woolworths. Any future "Prices Dropped" promotion will have a scepticism threshold that was not exist before 2024. The ACCC did not caused this trust fallacy, it revealed it.

## 3.2 Trust Equation:

# Why Trust Will Not Recover Quickly

The Consumer Journey Map showed where trust broke down. The Trust Equation (Maister, Green, & Galford, 2000; Brooke, Lecture 5, 7 April 2025) explains why it will not recover quickly, by disaggregating trust into measurable dimensions, it identifies which aspects are most critically damaged.

### **Credibility:** **damaged by design, not by accident.**

By April 2024, one in four consumers was unable to identify whether supermarket price labels are an actual discount, according to CHOICE research (CHOICE, 2024). This was five months before the ACCC commenced legal proceedings.

**Figure 7**

Trust Equation applied to the Woolworths pricing controversy

### Trust Equation

(Credibility + Reliability)

Self-Orientation

= TRUST

Intimacy not examined: this failure is commercial, not personal.

Note. Adapted from Maister, Green, & Galford (2000); Brooke, Lecture 5, 7 April 2025.

The ACCC's separate Federal Court proceedings against Woolworths and Coles on 23 September 2024 (ACCC, 2024) gave formal legal weight to doubts that were already there.

### **Reliability:** a pattern, not a mistake.

Twenty months. Two hundred and sixty-six products. The Federal Court's May 2026 ruling found Coles used the same mechanism, 13 of 14 "Down Down" tickets were misleading (ACCC v Coles [2026] FCA 598). Consumers had no reason to treat Woolworths differently.

### **Self-Orientation:** the factor that brings trust down hardest.

Only 17% of Woolworths shoppers believed the supermarket was genuinely trying to keep prices low (CHOICE, 2023). The alleged conduct took place when consumers were at their most vulnerable financially and when they were at their most dependent on a promotional price (ACCC, 2024). A retailer perceived as protecting margins at that moment faces a trust deficit no campaign can close, whether it be because of a deliberate move or simply institutional drift.

All three dimensions are damaged simultaneously and each reinforces the others.

## 3.3 Five Why Approach: Organisational Root Cause Analysis

The concern about the pricing of Woolworths' promotions began to move from issues of specific pricing events to broader issues about the credibility of the promotional pricing system.

This section uses the Five Why Approach to consider how this system has evolved and maintained itself over time. This framework helps trace the evolution of the dependence upon the use of promotional pricing strategies, because of successive decisions taken in the operation, commercial pressure and market conditions. The escalation process at consumer, organisational and system level is summarised below in Figure X.

**Figure 8**  
Escalation of Woolworths' Promotional Pricing System

## Why 1 How did consumers start to doubt the promotional pricing of Woolworths?

Repeated promotional cycles following short-term price increases weakened the credibility of advertised savings. As the years passed, consumers began to wonder if “Prices Dropped” was a true representation of the value or a short-term price cut.

## Why 2 How did the promotional pricing in Woolworths become more flexible and aggressive?

The Federal Court case suggested that earlier “Prices Dropped” rules required products to remain at regular prices for extended periods before re-entering promotions. Later these periods were reduced from about nine months to about three to six weeks, which meant that the previous prices could not represent stable long-term value (McLeod, 2026).

Figure X shows the inflationary pressure in the period 2021-2023, this also raised the pricing volatility and made the use of promotional activity more intense in the supermarket sector (Atkin et al., 2026).

**Figure 9**

Australia Inflation Trend During the Alleged Misconduct Period

**Note.** Adapted from “ACCC takes Coles to court over ‘illusory’ discounts in ‘case of the century’” by ABC News, 2026, ABC News (<https://www.abc.net.au/news/2026-02-16/accc-coles-federal-court-case-discount-pricing/106294956>).

### **Why 3** Why did Woolworths increasingly use high-profile promotions?

The rising cost-of-living made consumers more sensitive to affordability of groceries and drove the need for greater focus to be placed on visible discounts that will drive store traffic and influence value perception.

In this context, “Prices Dropped” became more than just a short-term promotional effort and integrated into the company's value positioning. Then the supermarket industry was increasingly centralised and Woolworths and Coles were fierce competitors to each other, making the sector even more competitive (Ainsworth, 2025).

Promotional visibility became increasingly associated with customer perception and commercial reactions, making the pricing mechanism more promotion dependent.

### **Why 4** Why is short-term performance more important?

Operational indicators that are typically used to assess retail pricing decisions include sales growth, customer traffic and promotional responsiveness, which directly impact competitive performance.

Long-term perceptions of pricing fairness and consumer trust, on the other hand, are less frequent and more difficult to see in short-term operational reporting systems (Ferguson & Ellen, 2013). This boosted the level of attention paid to the effectiveness of promotion and short-term commercial responsiveness within the organisation.

### **Why 5** Why not discuss transparency and consumer trust earlier?

Consumers worry about the transparency of prices increasing across time. Grocery purchasing behaviour was, however, still heavily influenced by convenience, routine and the accessibility of prices (Machín et al., 2020).

Market level, both Woolworths and Coles remained dominant in the supermarket industry (Ainsworth, 2025). Promotional pricing therefore continued to operate within a commercially stable environment where public criticism, consumer behaviour and market competition reinforced the persistence of the pricing system rather than disrupting it.

## 3.4 Stakeholder Mapping Matrix: Stakeholder Pressure and Persistence Analysis

Consumer, regulator, supplier and media scrutiny of Woolworths' price promotions spread. This section uses the Stakeholder Mapping Matrix to explore the different levels of influence and pressure that various stakeholder groups had in relation to organisation change.

This framework explains how stakeholder pressure emerged differently throughout the system and organisational restructuring pressures continued to be divided.

**Figure 10**  
Stakeholder Mapping Matrix

## Suppliers

### High Exposure, but Limited Bargaining Power

The promotional pricing system created direct commercial pressure on suppliers participating in supermarket promotional cycles. Meanwhile, the large retailers had increased negotiating power in the supply chain, and a large number of suppliers were still commercially tied to large supermarket groups (Grigg et al., 2024).

That helped to minimize potential unified resistance from suppliers.

## Investors & Competitors

### Commercial Stability Reduced Immediate Restructuring Pressure

The ACCC investigations didn't stop at Woolworths, but also covered Coles and other major supermarket chains which reduced the competitive gap in the supermarket sector.

The market performance of Woolworths was constant in the highlighted period, as illustrated in Figure X. It means that there was little urgency on the part of the organisation to restructure fast.

**Figure 11**

Woolworths Group (ASX: WOW) Share Price Trend

**Note.** Adapted from "Woolworths Group Limited (WOW) ASX Chart," by Market Index, 2026, Market Index (<https://www.marketindex.com.au/asx/wow>).

## Consumers

### Concern Increased, but Behavioural Responses Remained Limited

Pricing transparency, pricing fairness, corporate ethical conduct became more important concerns of consumers.

Behaviourally, the decisions to buy groceries continued to be driven by convenience, price sensitivity and familiarity with the shopping environment (Woolworths Group, 2024). Consequently, the criticism of promotional pricing practices led to reputational damage, but failed to bring about significant shifts in the consumer's purchasing behaviour in the short term.

## Regulators

### Regulatory Pressure Increased Gradually

The ACCC's work in investigating promotional pricing practices and Federal court cases over time led to increased regulatory focus on the subject.

Regulatory enforcement was also legal and investigative in nature, which contributed to longer timeframes for disruption to organisations, and delayed the translation of regulatory focus to immediate operational changes within organisations (ACCC v Woolworths, 2024).

**The Woolworths case illustrates that stakeholder pressures were present in many stakeholders, but not all had the same magnitude, level of coordination and commercial effect.**

## 3.5 Risk Map: Four Levels of Psychological Safety & Impact Risk Level

Woolworths' ethical risks have led to the loss of both prospective and existing customers, and a risk map is precisely the tool needed to assess the potential risks associated with its strategy. Therefore, this part uses the impact risk level to evaluate whether Woolworths' misleading advertising will pose further risks to stakeholders in the future and to identify areas where potential risks may exist.

### Four Levels of Psychological Safety

In this part, we analyse stakeholder participation risk through four levels of psychology safety that are included, learning, contributing and challenging (Geraghty, 2021). Because the false pricing had actually damaged consumer trusts, which is a critical impact for stakeholders.

Consumers should not be treated as a passive group, and the internal pricing team should not claim whole responsibility, while Woolworth should introspect that false pricing leading the credit risk and public ethical standard. Then learning how the competitors like Aldi matched the ethical standard level, to further optimise the omission and align with the same ethical value.

For contributing evaluation, maintaining price competitiveness, the supply chain team should proactively engage with suppliers to discuss solutions and partnerships, using cost reduction to sustain the product ecosystem (Bodendorf et al., 2022). Meanwhile, the operations and pricing teams should leverage the supply chain's strengths to cut costs and achieve a pricing advantage. However, the challenges are obvious: Woolworth's senior leadership must align on this strategic objective and proactively address stakeholders' concerns—like information asymmetry and price opacity—before they lose trust entirely.

Although the process of rebuilding trust may be delayed by operational risks, and there is a risk that the public will perceive it as defensive reputation management, these factors pale in comparison to the risks associated with stakeholder participation.

# Impact Risk Level

Based on the above analysis, Figure 12 utilises the impact risk levels map to define the likelihood and severity of consequences (Sutherland et al., 2021), demonstrating that stakeholder participation risk is the highest priority. While unexpected impact and efficiency risks are less severe, they remain crucial for Woolworth's efforts to build trust.

Overall, if stakeholders remain only superficially involved and fail to address the underlying issues, it will be difficult to reestablish consumer trust through mere routine explanations, apologies, or price adjustments.

**Figure 12**

Woolworth's Impact Risk Levels

# 4. Value of the Proposed Methodology

**Figure 13**

Integrated Diagnostic Methodology

## Consumer Journal Map (CJM)

Consumer experience forms gradually across multiple touchpoints (Lemon & Verhoef, 2016 ). CJM could end-to-end analyse consumer experience, transforming Woolworths' comprehensive and complex ethical problem into a straightforward. Rosenbaum et al. (2017) also mentioned that CJM can draw a complaints, pricing evidence and sentiment, optimising consumer experience and reduce defensive purchasing behaviour.

Thus, CJM revealed the logical chain for “fake pricing” through separating consumers' psychological states in stages, providing Woolworths with a deeper understanding than conventional methodologies.

## Trust Equation

After identifying trust breakdowns through the preliminary CJM, the Trust Equation further analyses why trust collapses at specific points. In Woolworths' case, consumers' inability to trust the "original price" behind the "Prices Dropped" claim damages brand image and credibility (Monfort et al., 2025). As ACCC's allegations involved many products over a prolonged period, even corrected prices may still perpetuate consumer scepticism and undermine reliability (Hride et al., 2021). When consumers perceive promotions as prioritising profit margins over fair savings, self-orientation rises (Casteran, 2024). Therefore, this tool links price communication to honesty, consistency, and consumer fairness, offering deeper analysis of trust loss.

## Five Why Analysis

The Five Whys analysis demonstrates the progression from consumer-level symptoms to organisational behind logic. While previous tools explained how trust was eroded, further investigating the reason for Woolworths' promotional pricing practices may have emerged and persisted (Ito et al., 2022). It traces the superficial price issue to deeper organisational conditions with relaxed promotional rules, visible discounts reliance and short-term profit priorities. Therefore, it helps Woolworths to identify in-depth incentives and control mechanisms in further investigation.

## Stakeholders Mapping Matrix

The Stakeholder Mapping Matrix helps Woolworths assess how fake pricing affects different stakeholders and creates varying urgency for change. Managers prioritise stakeholders based on power, legitimacy, and urgency (Mitchell et al., 1997). In this case, shareholders hold stronger power because stable sales reduce pressure for immediate structural change, while consumer concerns may be weakened by habits, affordability, and limited alternatives. Executives must balance promotional competitiveness with trust restoration, as ACCC and media pressure gradually increase legal and reputational urgency. This tool helps identify which stakeholders accelerate, delay, or reshape change (Serna et al., 2022).

## Risk Map

The Risk Map provides value by translating Woolworths' realised ethical damage into prioritised impact risks. Rather than assuming that trust can be rebuilt through routine explanations or price adjustments, it evaluates which risks may further weaken stakeholder confidence.

The psychological-safety lens is useful because trust-repair efforts require stakeholders to feel safe to be included, learn, contribute and challenge existing practices; psychological safety supports speaking up, learning behaviour and improvement-oriented participation (Edmondson & Bransby, 2023).

The impact risk levels then help compare stakeholder participation risk, efficiency risk and unexpected impact risk by likelihood and consequence, which is consistent with risk matrix logic (Lemmens et al., 2022). This shows stakeholder participation as the highest priority for Woolworths' trust rebuilding.

## 5. Preliminary Option Areas for Further Consideration

The intent of this section is not to make final recommendations, but to suggest a few strategic areas that should be explored further after the proposed consulting engagement.

### 5.1 Promotional Transparency Review

We have some work to do on how to communicate consumer-friendly pricing on promotion. Greater transparency of pricing past, the way discounts are calculated and the way discounts are promoted could help alleviate consumer doubt around price fairness and discount credibility.

### 5.2 Pricing Governance Strengthening

In another key area, the governance framework of promotional pricing decisions will be reviewed. This may include auditing approvals, Price Control, and the relationship of the promotion KPIs with sustainable trust results. In reducing future reputational and regulatory risk, it may be helpful to improve the visibility of governance.

### 5.3 Consumer Trust Repair Communication

The broader reputational issues of the scandal could result in communication plans being required for Woolworths to try to rebuild the trust consumers have in the brand following the controversy. This can involve consistency in the messaging, increased transparency in pricing and a greater alignment of consumers' expectations and organizational behaviours. The option areas are not intended to be the final strategic options, but are only preliminary considerations. Further investigation would need to be carried out before any detailed decision for implementation could be made.

# Conclusion

This is a suggestion that the pricing issue of the Woolworths debacle can't be considered merely as a pricing issue. In contrast, it reveals a generic problem of loss of trust from consumers regarding the credibility of the promotion, pricing clarity, organisational governance and stakeholder pressure.

This was discussed within the proposal using a methodology that involves the Consumer Journey Map, the Trust Equation, Five Why Analysis, Stakeholder Mapping Matrix and Risk Map. These tools all provide a structured approach to examining the breakdown of consumer trust, its underlying causes and continuing factors affecting reputational risk.

The aim of the proposal is not to address operational solutions, but to diagnose, understand the situation strategically and identify risks. It allows Woolworths to see more into the interaction between more complex promotional communication and governance processes and the effect this has on consumer trust.

Overall, the proposed framework for consultation is professional and strategic and will help to create transparency in the pricing, trust between stakeholders and credibility within the organisation.
